# Patient Care Documentation on Any Device

ZOLL emsCharts®

SOLUTION OVERVIEW

ZOLL® emsCharts guides medics through the patient information to collect at the scene and integrates with your dispatch, billing, and ZOLL Care Exchange products to import essential health, demographic, and insurance data from across your healthcare ecosystem.

When minutes matter, patients — not clinical charting — are the priority. Capturing a complete ePCR records life-saving interventions and establishes the framework for the best possible outcomes across the continuum of care. With ZOLL emsCharts, time-consuming data entry is reduced to minutes, enabling crews to deliver more quality care to patients and to produce a more accurate, complete ePCR that informs every step of the patient's care, from clinical decisions to billing.

Capabilities

- Complete, cloud-based ePCR
- Guides medics through data collection on-scene
- Allows customization and prioritization of data fields based on agency needs
- Cloud-based for security, scalability, and availability
- Charts based on your workflow
- Customized dashboards with real-time data feed and unlimited user-defined reports
- Device agnostic to enable data collection from the field using iOS, Android, or Windows, online or offline
- Monitor/defibrillator integration

Designed With Clinicians in Mind

Simplify the way you document patient encounters and customize workflows to streamline data collection and reporting.

Benefits

- Decreases time spent on clinical charting and data entry
- Enables starting and completing the chart online or offline — upload when connected to the internet
- Frees up more time for patient care
- Captures the data you need to meet your agency's requirements
- Imports patient vitals and waveforms from connected medical devices
- Ensures compliance with state requirements and billing
- Integrates with CAD, medical devices, billing, and ZOLL Care Exchange for access to medical, demographic, and insurance data
- Built for HL7 bi-directional health information exchange
- Complete, accurate patient data visible to billers translates into clean claims and higher reimbursements
- NEMSIS v3.4 and v3.5 export to state repositories
- Low cost of ownership
- No initial capital investment
- Scalability, organic growth capacity
- Rapid iterations — innovation, security and analytics
- Continuous, automatic updates
- Privacy protection
- Guards against cyber-threats
- No technical expertise or IT support needed

Key Features

- Cloud-based technology
- Field data input from any current Apple, Android, or Windows device
- Patient ID scanning
- Returning patient lookup
- Signature capture from the field
- Fits any delivery model
- Inline data validation
- Interactive maps integration
- Data visualization
- Quick action buttons
- Analytics, reporting, and dashboards
- Quality assurance and management

Integrations

- Aladtec
- Handtevy
- Healthcall
- Operative IQ
- Priority On Demand
- Pulsara
- SyncPad
- Telestaff (Kronos)
