

RescueNet ePCR

Data-Driven, Compliant & Customizable

Redefine how you collect patient care information by simplifying the way medics input data and improving access to that information.

Improve Speed & Accuracy of Medics

Leverage our field data solution for record accuracy, data integration and advanced analysis. RescueNet ePCR:

- Prevents incomplete patient care reports
- Improves medic efficacy
- Reduces risk in the event of litigation or audits
- Eliminates inefficient paper processes
- Ensures protocol is followed consistently
- Uses integrated field data for syndromic surveillance

Simplify Data Input

Data is complex, and it's imperative that your ePCR data is complete, secure and provides the insight needed to effectively run your business. With RescueNet ePCR, medics are guided through the proper data collection process – by letting them know what data they need to capture before a report can be closed. This ensures your staff, Medical Director and state data managers have everything they need to do their jobs successfully. In addition, with features such as Quick Fill, medics can drastically reduce the time it takes to complete a PCR and ensure better compliance. Quick Fill takes away the focus on documentation and puts it back on patient care.

Easily Navigate Industry Compliance Changes

We are dedicated to ensuring that our products meet and exceed industry compliance standards and support best practices in data management. We focus on compliance so you can focus on patient care. Our RescueNet ePCR solutions comply with the latest health care industry requirements such as:

✓ NEMSIS

✓ 510K

✓ ICD-10

✓ HL7

How Does RescueNet ePCR Work?

RescueNet ePCR has a number of features and components that give you control over the documentation process in your organization:

- Customize and configure the software to view and collect the data that is important to your organization
- Easily tab from field-to-field when using keyboard-based input with rules to let medics know what data is missing to complete the report
- Logical flow to allow you to collect data in the same process that you provide care
- QuickLog allows fast time-stamping of common procedures
- Quick Fill drastically reduces the time to complete a PCR and helps ensure better compliance
- Ability to delete multiple vital signs quickly
- Cloud to Tablet integration with X-series
- Spell-check with a medical dictionary to help ensure professional reports
- Create editable, automated narratives
- Collect signatures electronically
- Complete, validated data maximizes billing reimbursement
- Route your PCR's appropriately for review to ensure QA/QI
- Set benchmarks and measure performance through advanced reporting functionality
- Provide hospitals with completed run reports

COLLECT DATA THAT IS IMPORTANT TO YOU

One of the key differences between RescueNet ePCR and other ePCRs on the market is the ability to customize and configure the software to view and collect the data that is important to your organization – all without costly programming. Configure your system to guarantee that all the necessary information is collected to ensure an accurate and timely billing process.

Integrations

- **RescueNet Dispatch** – Drive efficiency with next-generation CAD
- **RescueNet Billing** – Leverage same-day billing
- **RescueNet FireRMS** – Automate your department's records management
- **X Series monitor** – Keep all patient data in one location

Apps

- **ePCR for IOS** – Record patient vitals from anywhere

Record critical details at time of care for each incident

Quickly access patient info with a tap

Click to record medications, trauma, allergies and more
