

Integrate RCM Optimization Tools Into Your Offering

ZOLL AR Boost® API Integration

SPECIFICATION SHEET

ZOLL AR Boost is an automated RCM optimization tool that can be easily integrated, individually or in combination, into your healthcare technology offering.

Add our tools to your existing platform so your customers can automatically find, correct, and verify patient and payer information in real time and capture more revenue. We offer two integration methods so that companies can choose the solution that best fits their objectives and IT resources:

- Our standard API integration flows through your system and displays like your product, offering a seamless user experience.
- Our API with pre-built UI enables fast, easy integration of ZOLL AR Boost tools via a pop-up within your product.

Key Features

- REST and SOAP APIs
 - Native EDI formats
- Test environment to help with integration
 - Ability to create custom test cases
- Analytics to give you a clear view into your API transactions
 - Clearly see the number of transactions you are running
 - Troubleshoot errors
 - Monitor responses in terms of active coverage returned, not found, etc.

Capabilities

- All ZOLL AR Boost tools can be run in a single API call.
- Customized workflows available to incorporate multiple products with a single API call.

Benefits

- Ability to scale quickly with generous concurrent transaction thresholds
- Real-time responses to get you the data you need quickly
