Work Claims Sooner To Reduce Denials, Rejections, and Time To Collect

ZOLL AR Boost® Claim Status

D A T A   S H E E T

Our ZOLL® AR Boost® Claim Status tool runs claim status checks to provide early insight into how your claim is progressing once submitted into the payer's adjudication system.

Running claim status checks reduces the administrative burden required to monitor claims and ensures visibility through resolution and payment, regardless of the clearinghouse used for claim submission. Responses generated by Claim Status tool transactions will help provide early identification of claims requiring attention, helping staff focus on follow-ups, collections, and appeals. Moreover, our RCM optimization tools can be easily integrated into existing workflows via API options.
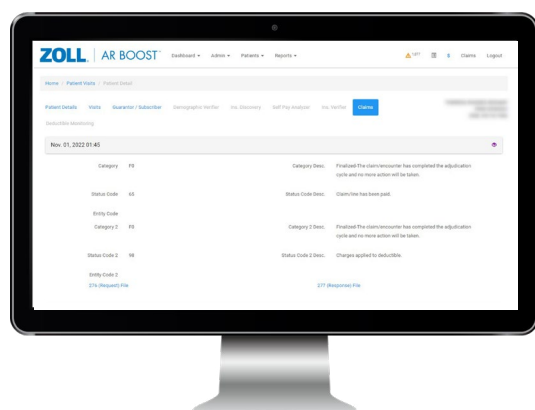

Features

- Runs electronic data interchange (EDI) transactions (276/277) to payer to get a real-time claim status response
- Returns claim status category codes (acknowledgements, data reporting, pending, and finalized)
- Clearinghouse agnostic

Benefits

- Obtains claim status in seconds, saving time and eliminating the need to log in to websites or make calls to payers
- Enables users to quickly view and prioritize which claims should be worked based on status
- Helps users respond to claim issues faster (rejections, denials, provider requested information, etc.)
- Provides claim status, regardless of which clearinghouse is used for claim submission
- Allows users to submit and view status for multiple claims via a single batch request or API

Explore All of the ZOLL AR Boost Tools

Demographic Verification

The ZOLL AR Boost Demographic Verifier tool enhances core demographics on more than 82% of patient claims, on average.

- Scours databases for information, correcting and replacing faulty or missing data for 60% or more encounters in real time
- Reduce returned mail by 60%
- The only demographic verification tool that provides a confidence score based on our proprietary 108-point algorithm, designed exclusively for the medical practice environment

Insurance Discovery

The ZOLL AR Boost Insurance Discovery tool finds active, billable healthcare coverage in real time for more than 40% of claims.

- Reduce write-off losses by identifying retroactive Medicaid eligibility for up to 5% of uninsured patients
- Discover 20% more commercial coverage
- Discover up to 17% more government coverage
- The only insurance discovery tool that delivers a confidence score based on our proprietary, 108-point algorithm

Insurance Verification

The ZOLL AR Boost Insurance Verifier tool combines innovative technology with receivables expertise to confirm eligibility and benefits in real time.

Third-party Liability Discovery

The ZOLL AR Boost Third-party Liability Discovery tool utilizes automation to identify additional coverage and capture higher-value payments quickly, without patient outreach.

- Captures up to 40% higher reimbursement than standard medical coverage
- Automatically finds up to 300% more overlooked third-party liability coverage

Prior Authorization

ZOLL AR Boost Prior Authorization is a centralized, AI-enhanced tool that helps streamline workflows, preserve revenue, and improve the patient experience.

Deductible Monitoring

The ZOLL AR Boost Deductible Monitoring tool provides real-time intelligence that empowers billing professionals to time claim submission for proper reimbursement.

Self-pay Analysis

The ZOLL AR Boost Self-pay Analyzer tool automatically helps improve self-pay revenue capture.

- Improves self-pay collection rate by more than 30% while supporting personalized financial options that improve patient satisfaction

MBI Lookup

The ZOLL AR Boost MBI Lookup tool quickly and automatically identifies and converts an individual HICN or SSN to Medicare Beneficiary Identifier (MBI) to help facilitate clean claims and optimum reimbursement.

Medicaid Redetermination

ZOLL AR Boost Medicaid Redetermination tools make it easy to verify demographics and determine eligibility in real time to help ensure continuous coverage.

- Provides a confidence score based on our proprietary 108-point algorithm, designed exclusively for healthcare

Retroactive Medicaid

The ZOLL AR Boost Retroactive Medicaid Status tool helps reduce the number of self-pay accounts by automatically monitoring eligible claims for active Medicaid coverage status and releasing them for submission when coverage is found.

API Integration Options

- Integrate the entire solution suite or individual tools into scheduling, patient engagement, billing, or any stage of your practice management or healthcare technology platform
- Choose standard API integration for seamless access to our tools from within your offering
- Choose our API with a pre-built user interface (UI) for rapid implementation and minimal developer demands
- Enjoy technical support and comprehensive developer resources to assist with implementation
