

Time Claim Submission To Help Optimize Reimbursement

ZOLL AR Boost® Deductible Monitoring

DATA SHEET

Our ZOLL® AR Boost® Deductible Monitoring tool provides real-time intelligence about a patient's deductible fulfillment that empowers revenue cycle professionals to drop claims with intention and precision.

This data-driven approach shifts primary financial responsibility to payers, increasing the likelihood of receiving proper reimbursement while lightening the cost-sharing burden on patients.

Billers can use our Deductible Monitoring tool to automatically check a patient's outstanding deductible on a recurring basis until it reaches the predetermined, customer-defined threshold. The tool sends notifications when the deductible falls below a certain dollar threshold. Billers can use this information to time the claim submission for "right-day billing," sending it to the payer only after the deductible has been (or is close to being) met and within a certain number of days of timely filing. If a claim has been in the queue for longer than the user-defined period and the deductible has still not been met, a notification to that effect is generated and the monitoring activity for that claim will cease. Moreover, our RCM optimization tools can be easily integrated into existing workflows via API options.

Features

- Automatically checks outstanding deductible amount
- Automatically notifies users when deductible is met, or timely filing deadline is near
- Configurable thresholds for checking patient deductibles

Benefits

- Enables "right-day billing" to capture maximum reimbursement from payers
- Reduces revenue loss associated with non-payment of patient-responsible portion of the bill
- Reduces touches per claim
- Reduces bad debt and collections costs
- Shifts primary financial responsibility from patients to payers
- Prevents multiple statements issued to patient

Configurable Settings

- Deductible Threshold: the dollar amount above which a record will be created for automated processing
- Low Deductible Remaining Threshold: the dollar amount below which no automated checking will take place
- Deductible Check Timing: user-defined, regular intervals
- Submission date or date of service
- In-network or out-of-network

Explore All of the ZOLL AR Boost Tools

Demographic Verification

The ZOLL AR Boost Demographic Verifier tool enhances core demographics on more than 82% of patient claims, on average.

- Scours databases for information, correcting and replacing faulty or missing data for 60% or more encounters in real time
- Reduce returned mail by 60%
- The only demographic verification tool that provides a confidence score based on our proprietary 108-point algorithm, designed exclusively for the medical practice environment

Insurance Discovery

The ZOLL AR Boost Insurance Discovery tool finds active, billable healthcare coverage in real time for more than 40% of claims.

- Reduce write-off losses by identifying retroactive Medicaid eligibility for up to 5% of uninsured patients
- Discover 20% more commercial coverage
- Discover up to 17% more government coverage
- The only insurance discovery tool that delivers a confidence score based on our proprietary, 108-point algorithm

Insurance Verification

The ZOLL AR Boost Insurance Verifier tool combines innovative technology with receivables expertise to confirm eligibility and benefits in real time.

Third-party Liability Discovery

The ZOLL AR Boost Third-party Liability Discovery tool utilizes automation to identify additional coverage and capture higher-value payments quickly, without patient outreach.

- Captures up to 40% higher reimbursement than standard medical coverage
- Automatically finds up to 300% more overlooked third-party liability coverage

Self-pay Analysis

The ZOLL AR Boost Self-pay Analyzer tool automatically helps improve self-pay revenue capture.

- Improves self-pay collection rate by more than 30% while supporting personalized financial options that improve patient satisfaction

Claim Status

The ZOLL AR Boost Claim Status tool runs real-time claim status checks to help billing professionals work claims sooner to reduce denials, rejections, and time to collect.

MBI Discovery

The ZOLL AR Boost MBI Discovery tool quickly and automatically identifies and converts an individual HICN or SSN to Medicare Beneficiary Identifier (MBI) to help facilitate clean claims and optimum reimbursement.

Medicaid Redetermination

ZOLL AR Boost Medicaid Redetermination tools make it easy to verify demographics and determine eligibility in real time to help ensure continuous coverage.

- Provides a confidence score based on our proprietary 108-point algorithm, designed exclusively for healthcare

Retroactive Medicaid

The ZOLL AR Boost Retroactive Medicaid Status tool helps reduce the number of self-pay accounts by automatically monitoring eligible claims for active Medicaid coverage status and releasing them for submission when coverage is found.

API Integration Options

- Integrate the entire solution suite or individual tools into scheduling, patient engagement, billing, or any stage of your practice management or healthcare technology platform
- Choose standard API integration for seamless access to our tools from within your offering
- Choose our API with a pre-built user interface (UI) for rapid implementation and minimal developer demands
- Enjoy technical support and comprehensive developer resources to assist with implementation
