

Find Third-party Liability Coverage for Complex Claims

ZOLL AR Boost® Third-party Liability Discovery

DATA SHEET

The ZOLL® AR Boost Third-party Liability Discovery tool identifies additional coverage and captures higher-value payments quickly, without patient outreach.

Manually identifying insurance coverage in addition to primary health insurance for complex claims is time-consuming. It requires many phone calls, manual research, and making sense of incomplete patient questionnaires. Motor vehicle and workers' compensation injury-related claims require a detailed investigation to determine liability accurately for optimum reimbursement. Yet, patients may not provide or have access to accurate insurance information. They may not even know that they have coverage. Even if third-party coverage is found, motor vehicle and workers' compensation recovery requires a detailed investigation to determine liability accurately for optimum reimbursement.

The ZOLL AR Boost Third-party Liability Discovery tool utilizes automation to identify every coverage option and payer source, matching the correct payer to the patient and eliminating the need to burden staff or patients for additional information.

By routing the right claims to third-party insurers, the ZOLL AR Boost Third-party Liability Discovery tool helps providers capture up to 40% higher reimbursement than they would from traditional payers. For claims selected, it also automatically finds up to 300% more overlooked third-party liability coverage, allowing healthcare providers to capture more revenue through a new income stream without overhauling their current processes.

Capabilities

- Identifies every coverage option and payer source
- Eliminates the burden on staff and patients to track down additional information
- Integrates easily into current workflows without disruption

Benefits

- Captures up to 40% higher reimbursement than standard medical coverage
- Automatically finds up to 300% more overlooked third-party liability coverage
- Saves time by leveraging automation to find coverage efficiently and compliantly
- Significantly reduces patient outreach
- Creates a new income stream within existing processes
