

Minimize Radio Communication, Save Time, and Reduce Errors By Automatically Transferring Data Between Dispatch and Crews in the Field

ZOLL® Respond SOLUTION OVERVIEW

Our ZOLL Respond mobile companion app to ZOLL Dispatch reduces unnecessary phone calls, automatically transferring data between dispatch and crews in the field.

Crews can use real-time maps on any Android or iOS mobile device to view, respond, and receive GPS-enabled turn-by-turn routing guidance to trip pick-up and drop-off points. Trip status updates, trip management, and mileage calculations can all be shared automatically. No need for crews to remember or write down critical information when traveling to a scene — with the ZOLL Respond application, details are in the palm of your hand. Automatic data transfer reduces the number of data touch points to minimize the risk of errors and omissions and take the burden off crews to write down critical information while traveling to the scene. Crews are freed up to focus on what matters most: taking care of the patient.

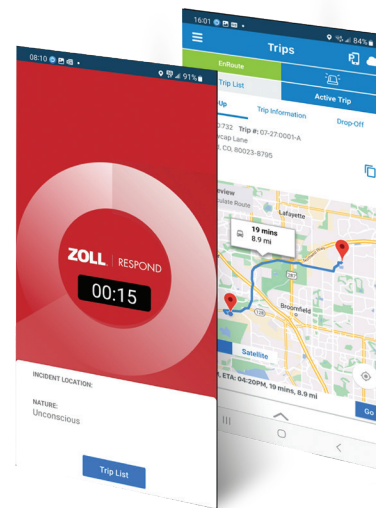

Capabilities

- Navigate to pick-up and drop-off points
- View, track, and respond to trips through cloud-based, real-time enhanced maps
- Communicate statuses EnRoute through Complete

Track, Update, and Communicate Transport Statuses More Efficiently

Our ZOLL Respond application gives dispatchers, crews, and clinicians at the destination facility cloud-based mapping that puts turn-by-turn routing and navigation in the palm of your hand.

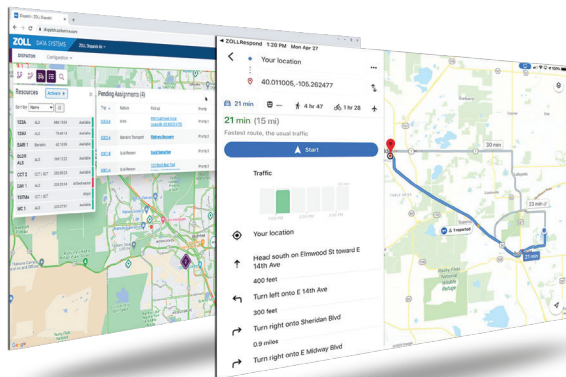

Key Features

- iOS and Android smart device compatible
- Automatic trip status updates
- Integrated GPS trip management
- Integrated cloud-based mapping, turn-by-turn navigation, and live traffic
- Automatic mileage calculation
- Visual and audible trip response alerts

Benefits

- Provides automatic data transfer between dispatch and crews in the field
- Real-time mapping enables turn-by-turn routing and easy navigation
- Minimizes communications center chatter
- Reduces data touch points and minimizes risk of data entry errors and omissions

Route to Scene

Once a crew acknowledges an assignment and is en route, the route is displayed and turn-by-turn directions can be activated.
